Jakarta, Indonesia | jonathandjoko28@gmail.com | +6281253735427 | [GitHub](#) | [Linkedin](#)

Professional Summary:

Full Stack Software engineer with hands-on experience developing and supporting enterprise applications across the insurance and banking industries. Experienced in frontend development using React, Redux, Tailwind CSS, and Material UI, as well as backend development using ASP.NET, SQL Server, and Python. Proven ability to build scalable internal systems, optimize backend performance, troubleshoot production issues, and collaborate with cross-functional teams in Agile environments. Familiar with micro-frontend architecture, secure authentication integration (MFA/Azure), REST APIs, and enterprise application maintenance.

Professional Experience

Bank Negara Indonesia – Backend Developer

Apr 2026 – Present

- Optimized a critical SQL query and stored procedure, reducing average response time by 92% (40s -> under 3s), which resolved report generation timeouts and enabled successful report downloads in production.
- Investigated and resolved production issues involving missing and inconsistent data by debugging SQL joins, stored procedures, and cross-system integration flows in enterprise banking applications.
- Implemented SonarQube integration for .NET Framework applications and remediated SAST/DAST security findings by analyzing vulnerabilities, resolving insecure coding patterns, and improving overall code quality compliance.

Asuransi Astra Buana – Frontend Developer

Mar 2025 – Mar 2026

RIANG (Main Project – Employee Super App)

- Contributed to RIANG, an internal employee super app used across the company for reimbursement, approval workflows, and service requests, supporting day-to-day operations for all Asuransi Astra Buana employees
- Built and enhanced responsive UI using React, Redux, and Tailwind CSS
- Owned end-to-end development of request modules (reimbursement, office car, snack meeting) including multi-step dynamic forms, validation logic, and approval workflow integration with backend APIs
- Integrated Multi-Factor Authentication (MFA) using Microsoft Identity and Azure for secure login flow
- Collaborated closely with QA and Business Analysts in Agile sprints to deliver stable features

Service Traffic System (STS)

- Built a queue management system for insurance branch offices, improving customer flow and reducing frontliner idle time
- Implemented real-time dashboard and queue status updates UI using React, Redux and Material UI
- Built reusable components such as customer modal and monitoring dashboards
- Developed and integrated APIs using C# (ASP.NET) for check-in, walk-in services, and frontliner status tracking
- Developed TV display interfaces to show real-time queue information and customer check-ins
- Implemented automated voice announcement system for queue calls (e.g., queue number and assigned counter)
- Contributed to micro-frontend architecture and deployment using Nginx

Education

Bina Nusantara University - Computer Science

Aug 2022 – Sep 2026

- CGPA: 3.85 / 4.00

Work Projects

Asuransi Astra Anniversary Digital Display – 2025 (React.js, TypeScript, REST API, Tailwind CSS)

- Developed an interactive digital display application presented on an 80-inch LED screen during Asuransi Astra's corporate anniversary event.
- Built dynamic attendance and employee birthday visualization components to enhance participant engagement.
- Implemented real-time data rendering and optimized the interface for large-screen display environments.

BNI Housing Subsidy Financing Platform (TAPERA) – 2026 (ASP.NET MVC, C#, SQL Server, REST API, jQuery)

- Contributed to the development and maintenance of a housing subsidy financing platform used for application processing, monitoring, and reporting.
- Implemented backend features, enhanced existing functionalities, and resolved production issues across enterprise systems.
- Optimized SQL queries and stored procedures, reducing report generation time from approximately 40 seconds to under 3 seconds.

Technical Skills

Languages: JavaScript, TypeScript, C#, Python, Go

Frontend: React.js, Next.js, Redux, Tailwind CSS, MUI

Backend: ASP.NET (C#), REST API, Gin, Flask

Database: MySQL, Microsoft SQL Server, DBeaver

Tools: Git, Postman, Figma, Bitbucket, Github
